PROFILE

Former Army officer and entrepreneur turned Applied-AI professional, solving business problems through governed implementation and workflow design. Brings military planning discipline and entrepreneurial ownership to structure ambiguous goals, manage stakeholders, track risks, and deliver measurable outcomes.

SKILLS

- LLM Guardrails & Claim-Boundary Design
- LLM Evaluation & Output Quality Assurance
- AI Workflow Enablement Design
- Python Scripting & Automation
- Requirements Gathering & Translation
- Workflow Adoption & Change Enablement
- Cross-Functional Program Leadership
- AI Use-Case Identification

SELECT APPLIED-AI PROJECTS

Applied-AI Projects

June 2026-Present

- **Built a governed Python RAG pipeline** that retrieves role-relevant facts from verified YAML before generation, grounding application content in a controlled source of truth rather than open model context.
- **Enforced layered AI governance** controls with forbidden-claim rules, safe phrasing, deterministic Python validation, and human review, blocking unsupported claims and preserving source-level traceability.
- **Evaluated RAG retrieval design** through controlled A/B testing across 3 role profiles, more than doubling match-relevance scoring (5.9 to 12.6) by adopting chunked retrieval as the production default.
- **Implemented a 5-model, 3-provider AI pipeline** with task-specific routing across generation, retrieval, and audit stages, keeping low-judgment task costs under \$0.02 per application.

EXPERIENCE

Founder and Operator, Independent Real Estate Ventures

2019-Present

- **Built website infrastructure** achieving 100 mobile / 99 desktop PageSpeed as a Google Ads quality prerequisite, centralizing 4 lead sources and reducing manual follow-up intake from 5 steps to 1.
- **Used TAM-style segmentation** to identify relocation buyers as the highest-fit target, aligning market research, buyer needs, competitive positioning, pricing sensitivity, and lead funnel design into a focused growth strategy.
- **Modeled reserves, repair risk, marketing spend, and rental strategy** using scenario and sensitivity analysis, shifting from short-term to mid-term rentals to save ~40 operational hours monthly.
- **Built and operated guest experience systems** across booking, turnover, and communications; achieved Airbnb Superhost status within 2 months, maintaining a 4.91 rating across 71 reviews.

Officer, Civil Affairs and Military Intelligence, U.S. Army

2015-2023

- **Directed operational governance** for a 4,000-person organization overseeing \$200M+ in intelligence assets, coordinating 14 teams, integrating ~10 stakeholder groups, and providing executive visibility.
- **Consolidated fragmented reporting** from 10 units across 5 capabilities into one readiness view, using thresholds, named owners, and gap scores to identify 4 integration gaps and inform senior leader decisions.
- **Redesigned the operating model** for Civil Affairs operations in Bangladesh, coordinating military, embassy, and host-nation stakeholders to double throughput despite constrained staffing.
- **Developed a Collection Management risk-assessment framework** to guide prioritization and execution decisions; formalized as a Brigade-level SOP, teaching the methodology to ~30 senior leaders at I Corps.

EDUCATION & INTERESTS

Education: University of North Georgia / BA, Chinese Language and Literature

2011-2015

Interests: I enjoy rock climbing, chess, running, and attending local events. I'm active in All Things Open (contributing author), Raleigh Veteran Connect, Team RWB, and am a team captain for the 2026 SAS Hackathon.
